Earth Sciences 3312A/B GENESIS ORIGIN OF METEORITES AND PLANETARY MATERIALS

The origin of meteorites and planetary materials (igneous, metamorphic and sedimentary rocks) will be deduced from textural evidence obtained from microscopic studies and geochemical evidence. These deductions then will be used to constrain hypotheses concerning genesis and evolution of Earth, other planets and the Solar System. This course reviews the origin and evolution of our solar system and formation of the rocky planets and other bodies by examining dynamical evidence and meteorites. We examine meteorite mineralogy and textures using optical microscopy, X-ray diffraction and geochemical data. We also examine Earth impacts, the moon and Mars.
